

Abstract of the Disclosure

A laser level is adapted to direct a laser path against a working surface. The level comprises a base, the base
5 comprising at least one pair of opposing edges, the base adapted to be positioned relative to the working surface such that each of the opposing edges is adjacent to the working surface. The level comprises an adhesive layer, the adhesive layer being situated on the base so as to
10 removably affix the base on the working surface without damaging the working surface. The level comprising an activating switch, the switch being located on the level at a location offset from the laser path.
